What is Device Management System?

The Device Management System of the amnimo IoT Cloud System makes it easy to monitor and maintain compact routers in remote locations.

The primary functions of the Device Management System are as follows

- Remote monitoring of devices
- Remote distribution and retrieval of device configuration files
- Remote firmware updates
- Syslog file acquisition

NOTE

- You must apply to use the features of the Device Management System. Please contact your sales representative if you wish to use this service.
