Safety Precautions

Safety Precautions · https://manual.amnimo.com/en/docs/safety-precautions-en-4/safety-precautions-4/

Before using the IoT Router

Before using the IoT Router, please read the "Before Using" document included with the IoT Router to ensure safe and proper handling.

Security Settings and Usage Environment for this Device

The product supports encrypted communication protocols such as SSH, IPsec, and HTTPS, which can be configured on the device side to enhance communication security. Enabling these functions reduces the risk of interception of communication contents and unauthorized access.
However, to ensure higher security, use this product only in a VPN environment, connection via a dedicated line, or in a physically or logically protected network environment. If the entire network is not secured, the settings on the device alone may not be sufficient to provide adequate protection. Please take thorough security measures by performing periodic firmware updates, etc. as well.

Use of SIM size conversion adapter

We deprecate the use of SIM size conversion adapters for any of our devices, long or short term. This increases the possibility of poor contact and may damage the SIM slot when removing or inserting the SIM or adapter.
Therefore, the customer is responsible for any problems caused by the SIM size conversion adapter.
