Create a time-lapse video

The time-lapse video creation function allows you to create a time-lapse video using thumbnails collected according to specified conditions.

NOTE

- Application is required to use this function.
- Time-lapse video creation (beta function) is not an official version and is not supported.
- Please be aware that unforeseen problems may occur when using the product.

1. On the target camera, click the icon, then click Create Time Lapse Video.

2. When the Time Lapse Video Creation screen appears, click "Date Range" in the Date Range Selection section.

3. In the displayed calendar, specify the date range for creating the time-lapse video (①) and click [Next] (②).
   *The maximum date range that can be set is one year.

4. Set a name for the time-lapse video (①) and click [Next] (②).
   The name of the time-lapse video defaults to the camera display name. A maximum of 64 characters can be set.

5. Set detailed conditions (①) and click [Next]. The following settings can be made in Common Settings.
   - **Day** of the week for time-lapse creation
   - Time **period** time lapse acquisition target time period (30 minute intervals)

- **Playback time** interval Time interval of each thumbnail of time-lapse video (10ms interval)
  Example: For 200 ms, 5 thumbnails are displayed per second.
  *The maximum value that can be set depends on the length of the time-lapse video to be created.

6. Confirm the set conditions (①) and click [Create].

7. Acquired time-lapse videos can be viewed on the Cloud Saved Videos/Images page.
   The Cloud Storage Video/Image page can be accessed from the menu.
